Northern Pass is an energy marketing venture, and those that want to benefit from it must simply pay market price for that benefit. Its not NH citizens responsibility to ruin our economy and our land values to subsidize multi-million dollar companies or high tax states. Our views are priceless to us and our visitors, and that is a problem for these financial entities. However, it is NOT a problem for NH land owners, citizens or visitors.

Another issue is, we in NH believe that clean renewable sources of energy are the path to a successful future for our children and grandchildren. This venture goes against those principles. Asking us to sacrifice our futures for an old dead-end energy paradigm, is not only foolhardy, but offensive. Would you dare ask the Pope for money for an abortion??!! I would hope not!

The "vital industry" that needs this power can find another source. The "families" that need this power have multiple options - they can conserve more energy, get solar, pay more for their power from another source, or vote to allow windmills/nuclear/hydro or whatever in their towns. Ruining OUR beautiful state is not the only option - its just the cheapest and easiest option for those who are going to benefit.

Pay to play or go away! Solar and Wind are CLEANER ways! (feel free to use)

Joan Newman Audley.
